# What we'll cover

---

- Revisiting the new grand compromise in CMS
- How WCM forged multiple early social contracts
- Breaking the social contract of digital experience management
- Breaking the social contract of no-code content preview
- Epilogue: “Black box” issues in digital experience platforms

---

1

# Revisiting the new grand compromise in CMS

---

**Marketers and content editors want  
control over non-web experiences**

Wearables

Websites

Responsive

Developers

Marketers  
Content editors

# The incongruity of content management today

---

---

**The CMS has always been built on  
an uneasy alliance between personas**

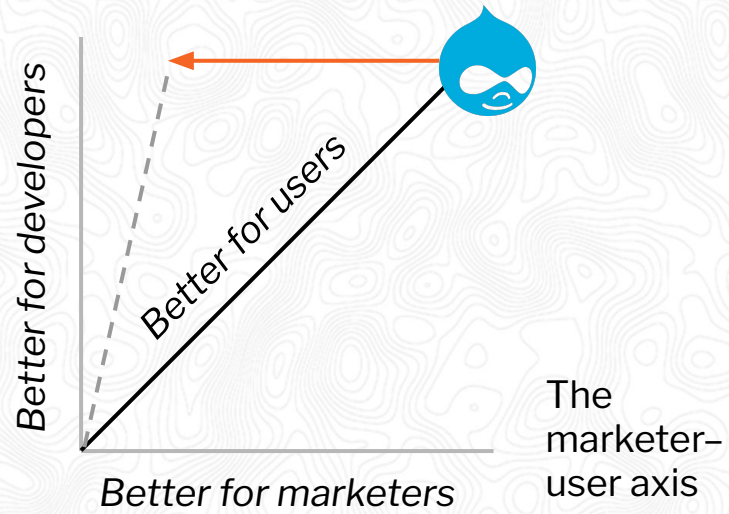

---

**Not all CMS personas are  
treated equal anymore**

---

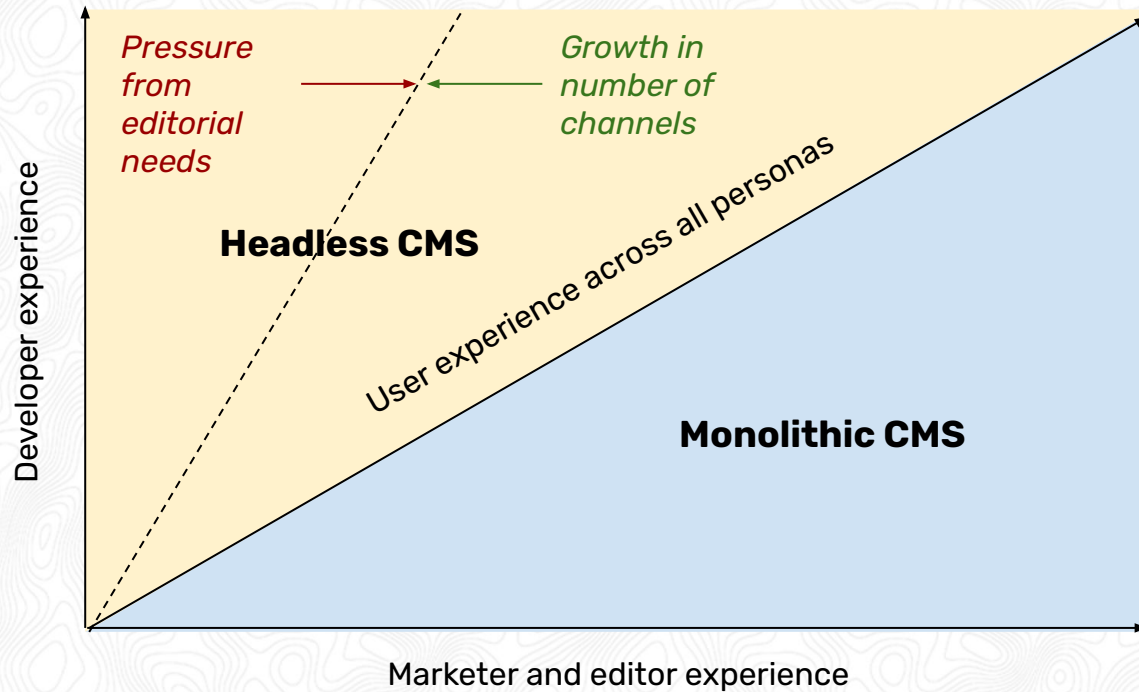

**This is the fundamental problem  
facing content management today**

The  
developer-  
user axis

The  
marketer-  
user axis

DrupalCon Vienna 2017

The incongruity of CMS

---

# From WCM to DXP

---

Inherent to the new idea of the DXP is the notion of many, not one digital experience.

- **Happy developers, unhappy marketers.** Content must look different on every channel, but marketers have no control over channels beyond the web.
- **Is site building dead?** How does a carefully templated, copiously perfected landing page translate to mobile or smartwatch? What happens to a list of related articles when the only way to access it is through voice?

---

# The Holy Grail of DXP

---

The Holy Grail of digital experience management is **presentation management**.

- This is not just the ability to manage how content is displayed in terms of how items are sequenced or how a template is spliced into cards on a smartphone.
- It is also about how to create a compelling developer experience that makes the evolving relationship between the marketing team and engineering team as frictionless as possible.

---

**Digital experience management  
must aim to restore the balance**

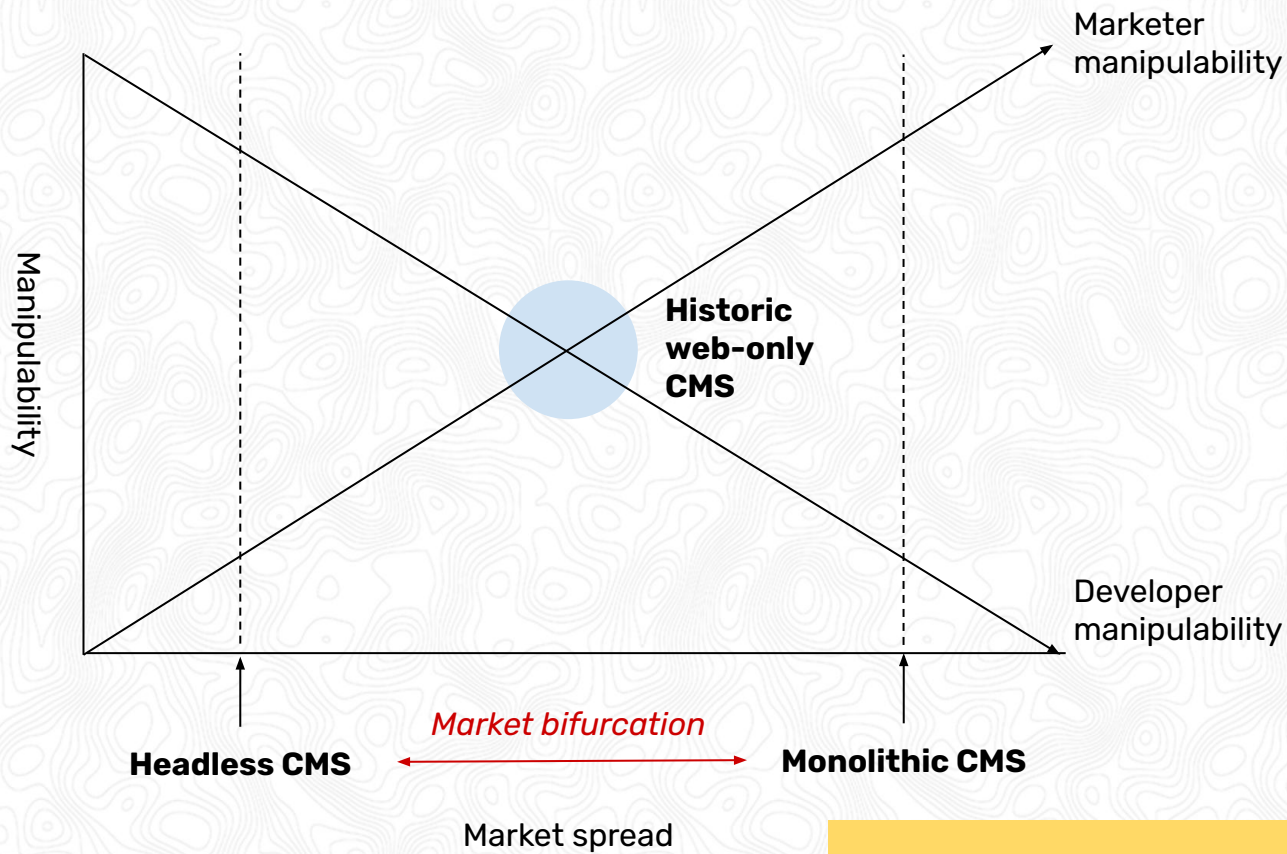

**The challenge is how to ensure  
both developer teams and  
marketer teams are satisfied**

---

**How do we help in situations where  
marketers feel left behind?**

---

**How do we help in situations where  
developers feel left behind?**

CMS market bifurcation

---

# 2

**How WCM forged multiple  
early social contracts**

---

**The first early social contract was  
digital experience management**

---

# Single-site vs. multi-site WCM

---

- Among the first decisions WCM vendors needed to make was whether to enable **single-site** or **multi-site** management.
- Because **websites** were the only digital experiences at the time, shared infrastructure and technology made this an easy proposition.
- But today it's not that simple.

---

**Traditional WCM only dealt with:  
Should we be single-site or  
multi-site?**

---

**The second early social contract was  
no-code content preview**

---

**Traditional WCM only dealt with:**  
**How should we enable no-code  
content preview?**

---

**This social contract quickly expired  
with the advent of novel channels**

---

**Today, a common customer refrain:  
“It used to be so easy; why is it so  
much harder now?”**

---

# New digital experiences

---

- Data needs to end up in more than just websites, and those content consumers need to be first-class citizens too.
- The headless CMS upended the CMS market owing to its fairly successful argument that it's simply impossible to manage digital experiences writ large in the same way we manage individual websites.
- Shrouded in the promises of developer freedom is the disenfranchisement of editors who see yet more of their power stripped from their key roles.

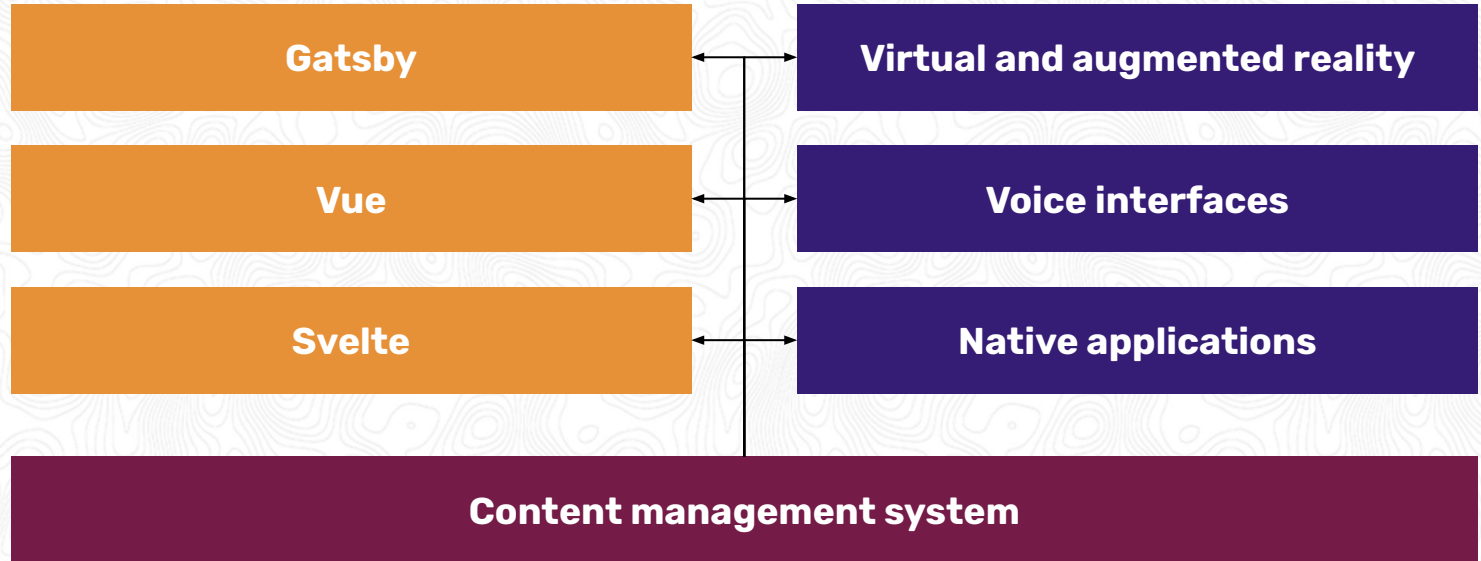

---

# 3

## Breaking the social contract of digital experience management

## JavaScript front ends

## Other channels

Proudly rendered elsewhere

---

**JavaScript-driven rendering is now  
encroaching on traditional CMS  
server-side rendering**

Cambrian explosion

---

# “Why is it so hard now?”

---

- In my conversations with enterprise organizations and small businesses alike, I hear a common refrain: “It used to be so simple. Why is it so complicated now?”
- DXP vendors seem besieged from all angles by the same personas they used to serve effectively:
  - product managers want more digital experiences
  - content strategists and editors want more visibility into those experiences
  - developers continue to want freedom to build

---

# “Why is it so hard now?”

---

- For architects and developers who decry the emphasis on digital experience management as opposed to channel agnosticism, look at the problem for a moment from the editor’s perspective.
- For many years, all site builders had to do was install a CMS, add some templates and a theme, and voilà! A fully built, production-ready website.

---

**As infrastructures diversify,  
we need a paradigm shift in digital  
experience management**

---

# 4

## Breaking the social contract of no-code content preview

---

**As infrastructures diversify,  
we need a paradigm shift in no-code  
content preview too**

---

# No-code preview

---

- WCM made a promise: “No matter how you build your site, there will always be a no-code approach to content preview available for you to check it before it goes live.”
- Preview in digital experience platforms is the single feature that has led to both unprecedented innovation in the CMS market but also unmitigated frustration among our customers.

---

# No-code headless preview

---

- Preview in digital experience platforms is the single feature that has led to both unprecedented innovation in the CMS market but also unmitigated frustration among our customers.
- Most vendors provide either a hodgepodge of integrations with infrastructure providers or preview buttons provided via plugin.
- Others have “single-page app editors” that are so custom-built they virtually guarantee vendor lock-in.

---

# No-code headless preview

---

- Are marketing teams everywhere destined to lose out on all the benefits of the channel explosion by handing all of their needs to technical teams that might care much more about performance enhancements than supporting no-code preview?

---

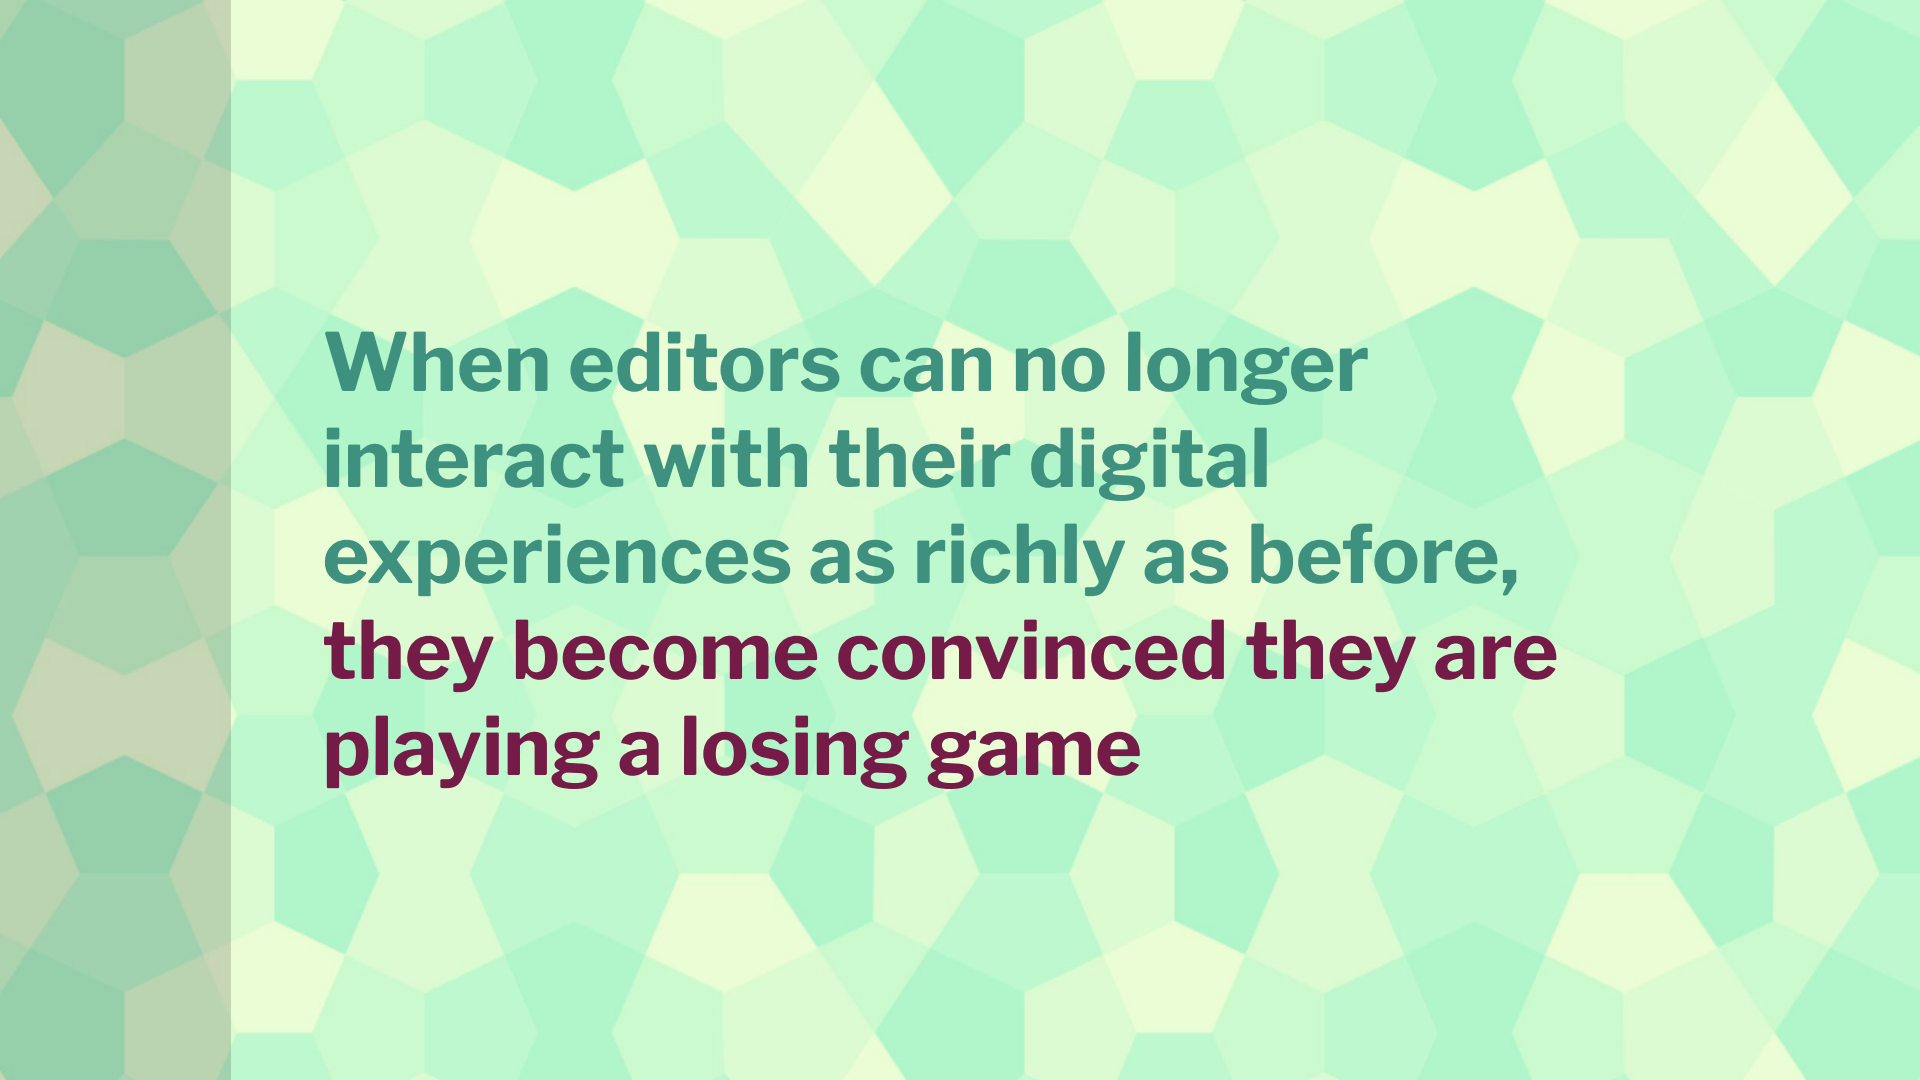

# 5

**Epilogue: “Black box” issues in  
digital experience platforms**

**When digital experiences are no longer tangible, viewable entities, they become black boxes, unreachable siloes, developer-only playthings, and editorial orphans**

**When editors can no longer interact with their digital experiences as richly as before, they become convinced they are playing a losing game**

**The DXP must never lose sight of  
its past as a multi-persona  
enabler and democratizer**

---

# Thank you!
