

# Reducing Bias in Content Strategy

Marli Mesibov, Lead Content Strategist, Verily

October 24, 2022

# Hi! I'm Marli!

I am...

- [@marsinthestars](#) on Twitter
- Lead Content Strategist at Verily
- Super frustrated with my Google Assistant because she doesn't listen to me.

**“[S]peech recognition is another form of AI that performs worse for women and non-white people.”**

*Joan Palmiter Bajorek, “Voice Recognition Still Has Significant Race and Gender Biases”*

# Stats about Voice UI

## 95% overall success

[Design in Tech report](#)

from 2017 shows a 95% success rate in voice UI correctly responding to voices.

In the five years since, no one has reported a higher success rate.

## 53% Scottish English

However, that rate goes down to 53% when we move from American English to Scottish English.

## 13% lower for women

Most voice UI was tested with men, not women. Women's voices have a 13% lower success rate.

**This is not specific to Voice UI!  
We see bias across all channels.**

# There is bias across all types of AI and UX

## AI Assistants

AI assistants like Alexa and Siri need to respond to voice commands.

If the AI assistant isn't tested with a variety of accents and vocal pitches, it won't work.

## Chatbots

Chatbots are written with branching logic to respond to key words or phrases.

The words and phrases are based on the creation team's assumptions about what the end-user needs.

## Data-based products

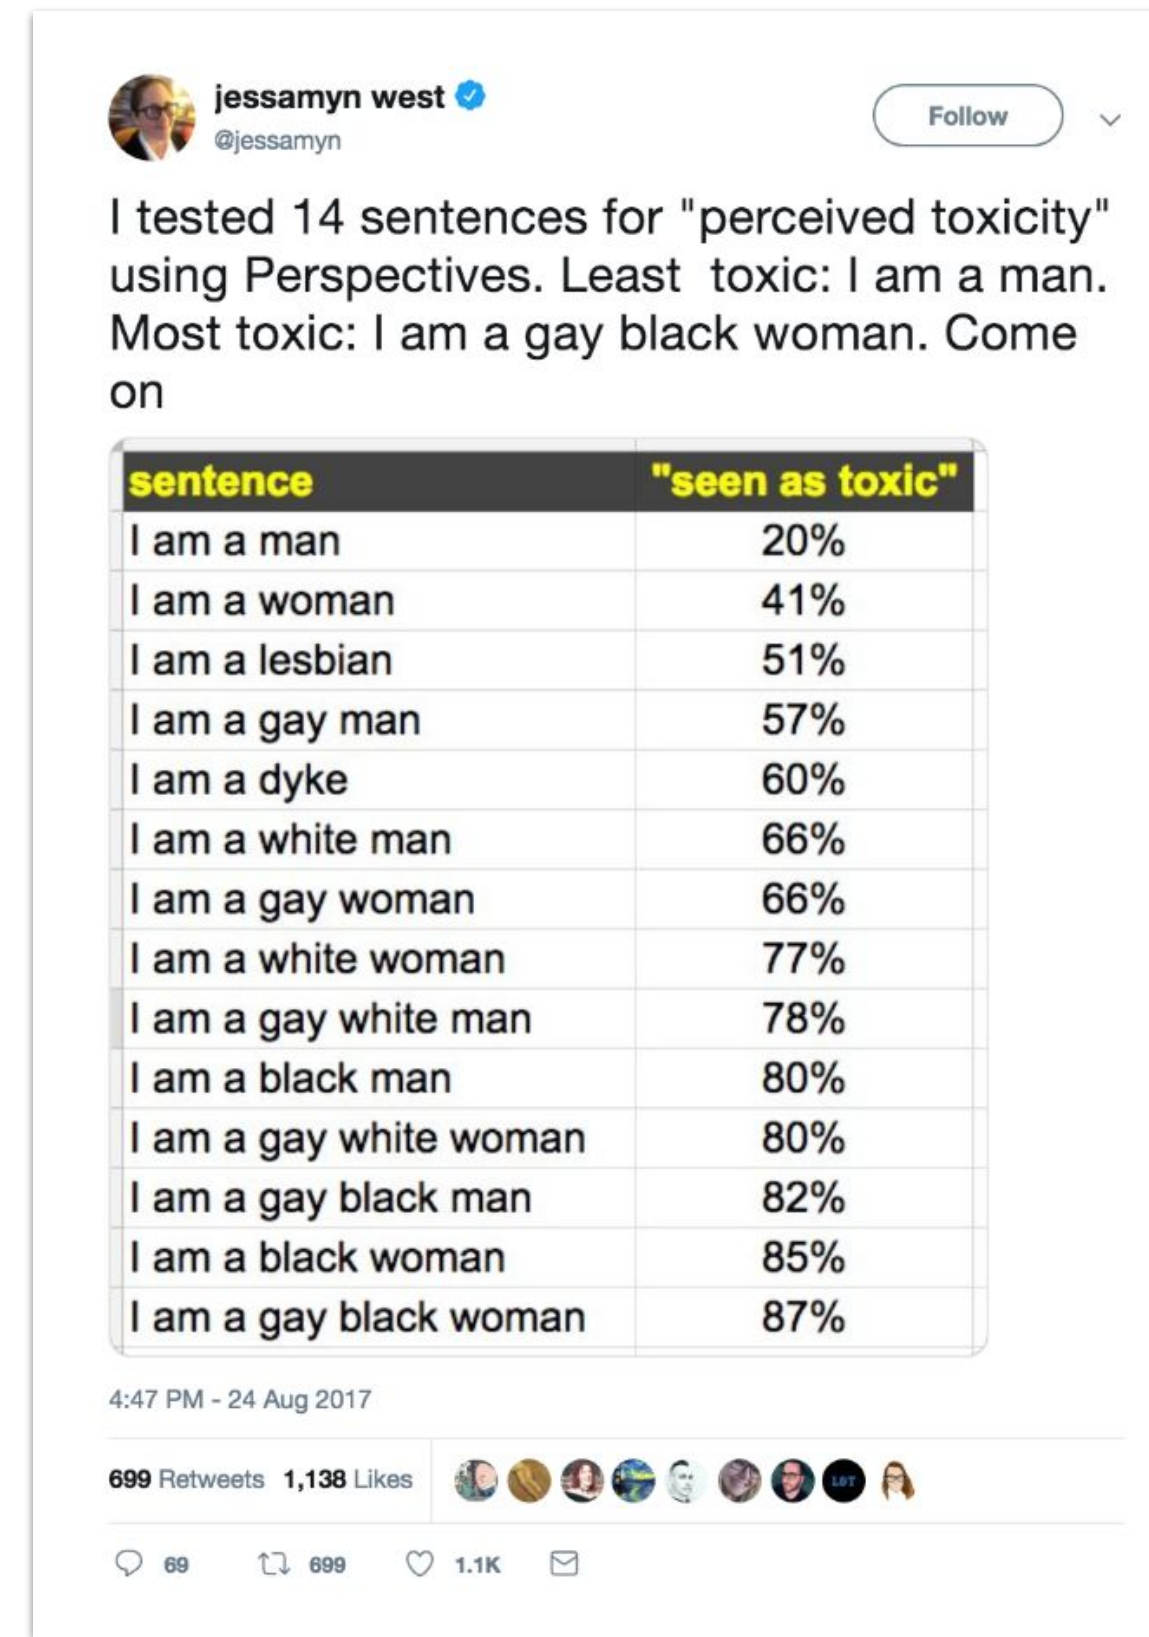

We are actively building products that take our assumptions, and build them into the branching logic and machine learning that we set up.

# Perspective, an API for tracing toxicity

APIs like Perspective initially failed, as they took broad social data, but didn't comb it to remove the bias.

Mistake: assuming Data is neutral

[More advice on how to be an anti-racist data scientist](#)

**jessamyn west** @jessamyn

I tested 14 sentences for "perceived toxicity" using Perspectives. Least toxic: I am a man. Most toxic: I am a gay black woman. Come on

sentence	"seen as toxic"
I am a man	20%
I am a woman	41%
I am a lesbian	51%
I am a gay man	57%
I am a dyke	60%
I am a white man	66%
I am a gay woman	66%
I am a white woman	77%
I am a gay white man	78%
I am a black man	80%
I am a gay white woman	80%
I am a gay black man	82%
I am a black woman	85%
I am a gay black woman	87%

# Glow, period tracking app

Apps like Glow assumed that the only reason to track your period is to get pregnant.

Even with Glow's update, there are no options around general health.

[More info from Vox](#)

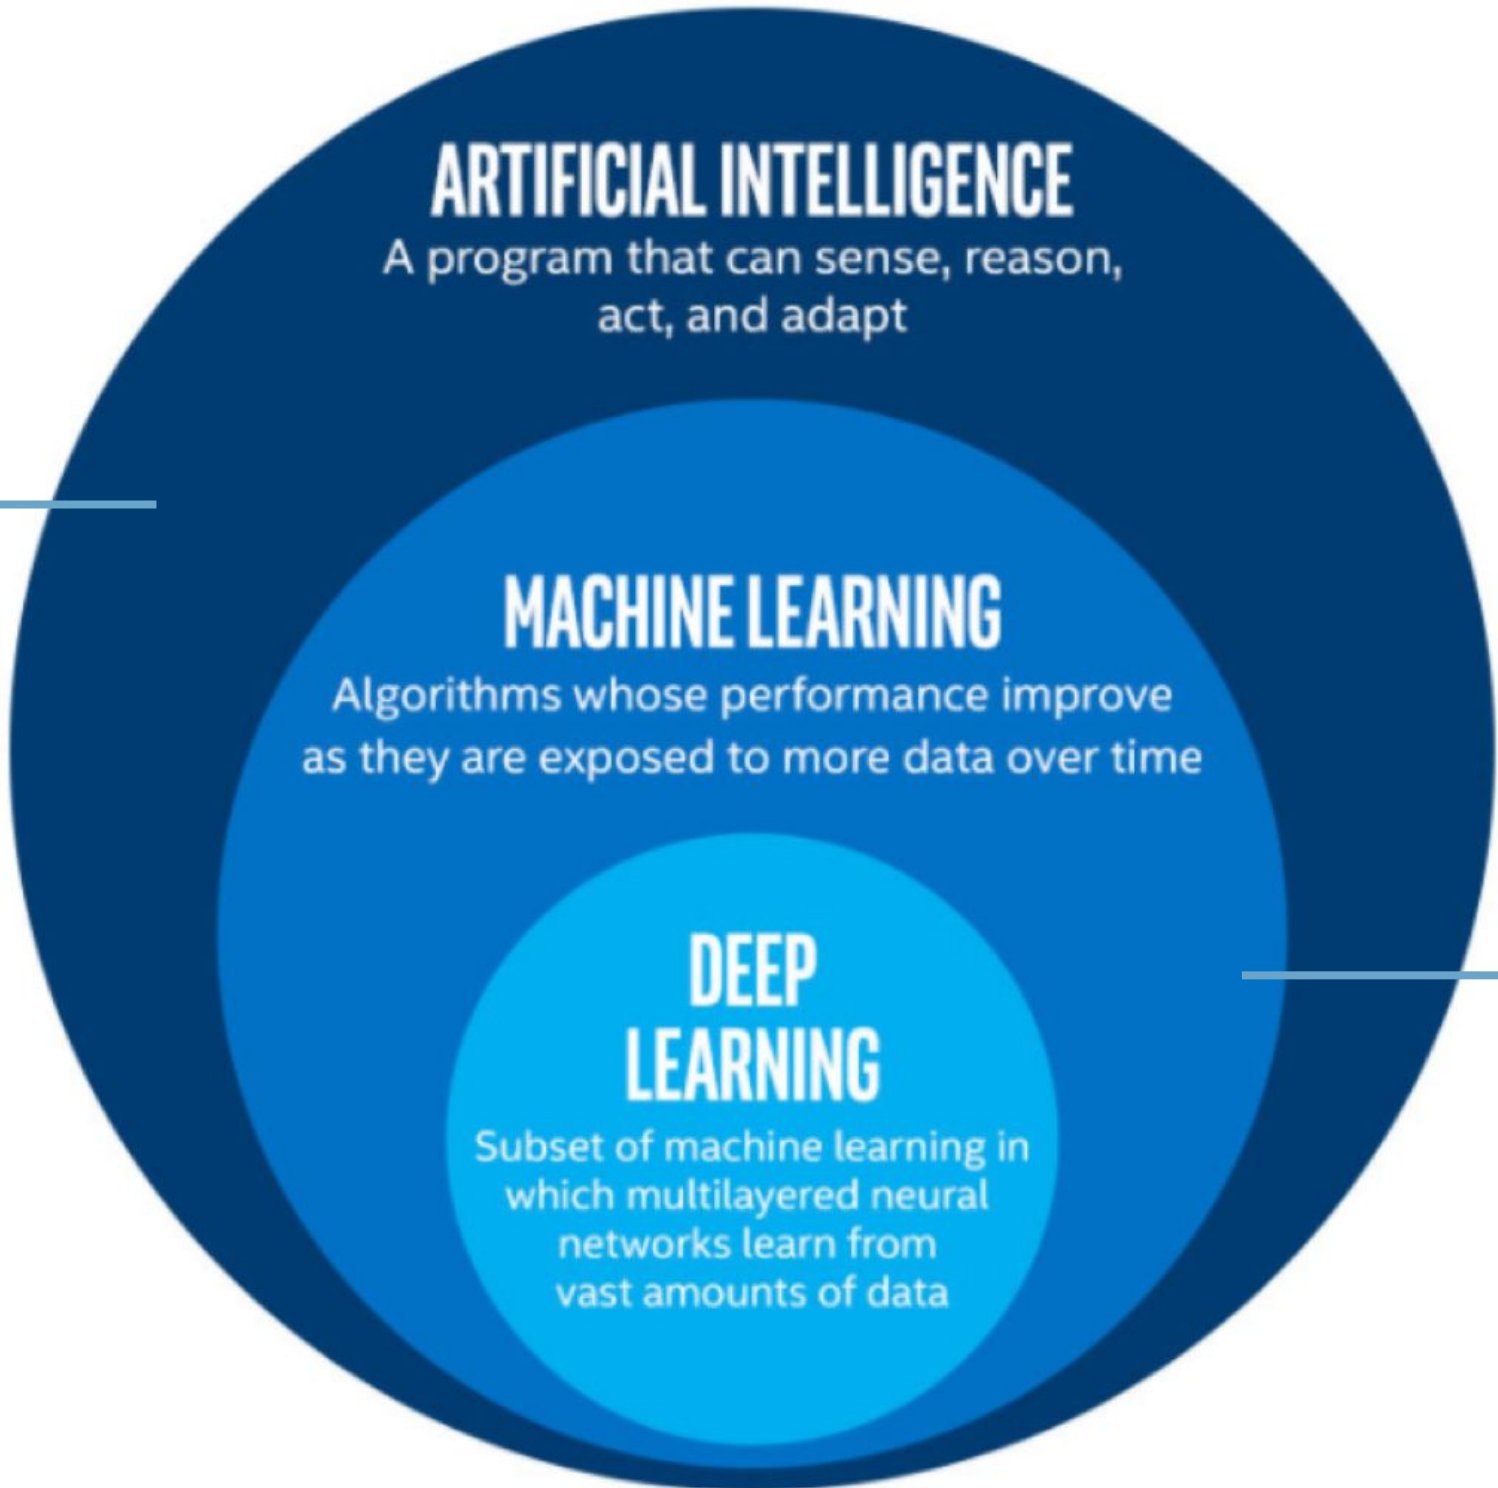

# Where does bias come from?

# Where does biased AI come from?

# “Machine learning” is not a magic bullet. AI is only as good as the content that feeds it.

What is it told to sense and respond to?

What is it told to look for, consider an “error”, and improve based on?

# Lack of diversity in the teams building and testing the systems

- 9/10ths cisgender men
- 9/10ths able-bodied, white, American accents
- Similar assumptions about phrasing and AI needs

# Misunderstanding of “edge cases”

- Women are told to speak with a lower voice to get AI systems to hear them
- Apps are build for the 80% (everything else is “edge cases”)

# What can you do?

# Make the industry representative

- Hire diverse teams
- Mentor people who don't look or sound like you
- Ask yourself why underrepresented groups are underrepresented

# Look at your assumptions

- Create for “edge” cases
- Focus on behaviors over demographics
- Make your assumptions explicit, not implicit

# Keep learning

- Read up on how to be anti-racist and anti-biased
- Share your findings with coworkers
- Avoid defensiveness in favor of being better

What else will you do, to make  
content strategy less biased?

# Thank you!
